

The logo for XSCoin features a stylized 'X' composed of blue and green curved segments. To its right is a large, light green 'C' with a blue diamond shape inside. The text 'XSCOIN' is written in a bold, black, sans-serif font, centered horizontally between the 'X' and the 'C'.

**XSCOIN**

XSCoin is cutting edge digital currency by aiming wide customer base on global scale in Asia as well as on international market and presumptive investors to who we can showcase our cryptocurrency. Key advantage of the project is the sophistication of chained Algorithm which provides enhanced level of security. X11 Algorithm can provide increased trust for it's users and potential investors.

for future perspective, XSCoin will support B2B and B2C. We are launching the card to support our global users.

We focussed to be always user friendly with most secure network.

# Introduction of cryptocurrency

2018 has started and with time cryptocurrency has weaved its magic all around the world and it has become a global phenomenon to most of the people. Cryptocurrency gyrations attracted a lot of attention of the different sector of business. It has been seen politicians, businessmen, IT sector and many other fields have shown an active participation in it. While seeing the era, it seems that in coming years it will going to rule the market and soon it will be known as the king of digital. In a short duration of time, this technology has turned into an innovation and has become a medium of start-up of the new era of technology.

So before stepping ahead, it is imperative to know actually what is cryptocurrency?

In simple words, Cryptocurrency is a form of digital money that is designed to be secure and, in many cases, anonymous. It is a first virtual cryptocurrency of the world. It is a currency which is linked to the internet and it has a usage of cryptography the process of converting legible information into an almost uncrackable code, to track purchases and transfers. The main purpose of it to exchange the money even out of your geographical area. It is based on the decentralized process.

# Startup of Cryptocurrency - BITCOIN

The first cryptocurrency was launched in 2009 with the name of Bitcoin and it was invented by Satoshi Nakamoto - Person or a group of people the identity still has not revealed. It came as an open source software. It takes a lot of time to spread all over the world, in 2013 this coin has grabbed the attention of media and became popular as a worldwide payment system.

The Satoshi unit is nominated subsequent Satoshi Nakamoto, which is published a paper in 2008 that jump-started the evolution of the bitcoin cryptocurrency. It represents one hundred million of a bitcoin. In January 2009, Nakamoto published the first Bitcoin software that started the network and the first units of the bitcoin cryptocurrency, called bitcoins.

# History of Cryptocurrency

The need of cryptocurrency was felt in the Second World War itself. But finally after so long it has evolved in the digital era with elements of mathematical theory and computer science to become a way to secure communications, information, and money online. Along with this in ancient times merchants were looking to this time of technology there were in need and many people tried to make it successful but unfortunately, this project hasn't got successful, several ups and downs have faced by the experts. In the nineties, there have been many attempts to create digital money, but they all failed. The first form of net money was invented by the

American cryptographer David Chaum, in the Netherlands in the form of DigiCash but he was not able to succeed and in Microsoft deal, he leads to the eventual bankruptcy, the whole media attention is grabbed by it. But in 2009 it becomes successful through Bitcoin.

# A brief about XS Coin

XS Coin is based on proof of work and on latest, relevant and best technology that is blockchain – DASH Coin technology. We have utilized the technology blockchain which is a basic of the cryptocurrency. This is a superior technology and is a digitized public ledger which avoids centralization. Most cryptocurrencies don't take its full advantage, but we have used it from a core. As it is an imperative part.

XS is a coin which is unique from the other coins. And our way of using the blockchain technology with full potential makes us unique in the market. Only the blockchain doesn't make us unique, apart from this, in this, we have to use the best technology of blockchain that is DASH Coin, which keeps the record. It is made on X11 Script. Our service is secure and it is easy to use, so due to simplicity and easiest characteristic anyone can run it and it is the fastest. Our motive is to take the cryptocurrency to the wider customer base. It is fully operational, independent and privately owned.

# Information about coin

Name of Coin: XS Coin

Technologies - Latest and relevant technologies

Blockchain

Blockchain Dashcoin technology

Fastest and secure softwares

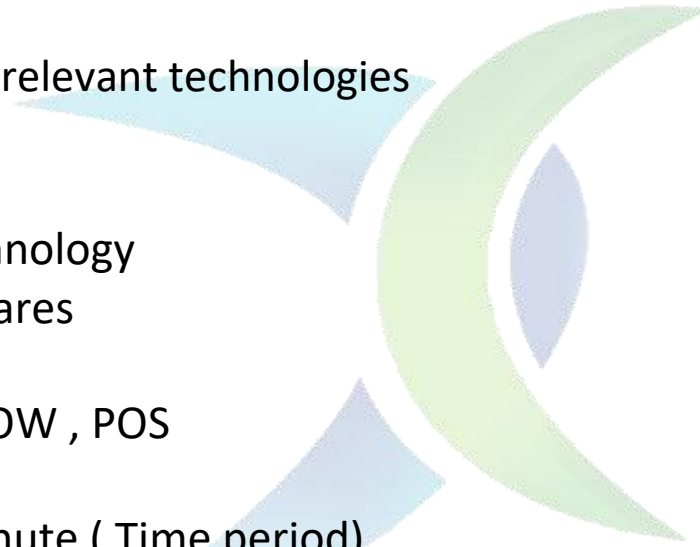

Usage- Algorithm X11- POW , POS

Block Generate : 2:30 minute ( Time period)

BlockSize:	1000 kb	( Maximum)
	250 Kb	( Minimum)

Total Supply Coins: 6 crore

Pre Mined Coin: 3 Crore

# Special Features Of Coin

XS coin is Based on the real web wallet.

In this coin Highly web wallet security is enabled.

It is Wallet to wallet transfer and 0.00001 charges.

On this coin a highly experienced technical team worked on it.

It is Based on blockchain technology, which is very fast block confirmation time.

You can mine free XS coin at your home on your Laptop easily VIA Get up.

You can send your money in any country by XS coin without any charge

# Description of special feature coin

Real web wallet: It has a real web wallet as you have your wallets in your pockets and they are totally secure and you use to keep your special assets on it, same as that XS also has a real web wallet in which you can save your transactions and maintain your wallet. BY exchanging selling or buying.

Security of web wallet: We know how much this wallet is important for you that's why it is made up with full security, it is totally secure and no one can pursue it without your permission. Your web wallet is fully secured by our technologies and the skills of our experts.

Wallet to wallet transfer charges is zero: The wallet to wallet transfer charges are not chargeable, it is free service. Hence if the transactions held from one wallet to other, so its charges are zero that means free of cost.

# Technologies

In XS coin project, we have kept our major focus on technologies, we have used the best, relevant and latest technologies for the secure and fast service in this project. XS Coin has been based on the blockchain Dashcoin technology.

It has been noticed that the main technology of the cryptocurrency is blockchain but then also in many projects, it has not been fully potentialized but in this, we have to use the best technology and that also we have used pre-eminent technology.

Now it's time to give you the answer why we have focused so much on this technology and what makes it best!

The blockchain is a choice of experts and it supports the modern demand and it has features of modernity. Blockchain keeps a record of each and every transaction and not only on one computer but on every computer it has a transaction record. The use of multiple inputs

# Technologies

corresponds to the use of multiple coins in a cash transaction. Since transactions can have multiple outputs, users can send coins to multiple recipients in one transaction. As in a cash transaction, the sum of inputs (coins used to pay) can exceed the intended sum of payments. In such a case, an additional output is used, returning the change back to the payer

It is a public ledger and it replaced the central banks it has record list each action used to record through blockchain along with this we have used the best and modern and relevant technologies as we believe in long-term business and relevant technologies makes us reliable and we want to maintain the trust of our clients and we assure them for their security as it is our responsibility. To fulfill our commitments and their requirements we have to use the best and relevant technologies the purpose behind was it only this.

Hence, Purpose of the blockchain ledger, that contains inventory records of all available Units of Energy that are ready for sale, together with their Certificate of Origin, is to establish a transparent, fully decentralized energy marketplace, that could be quickly and easily accessible from anywhere in the world.

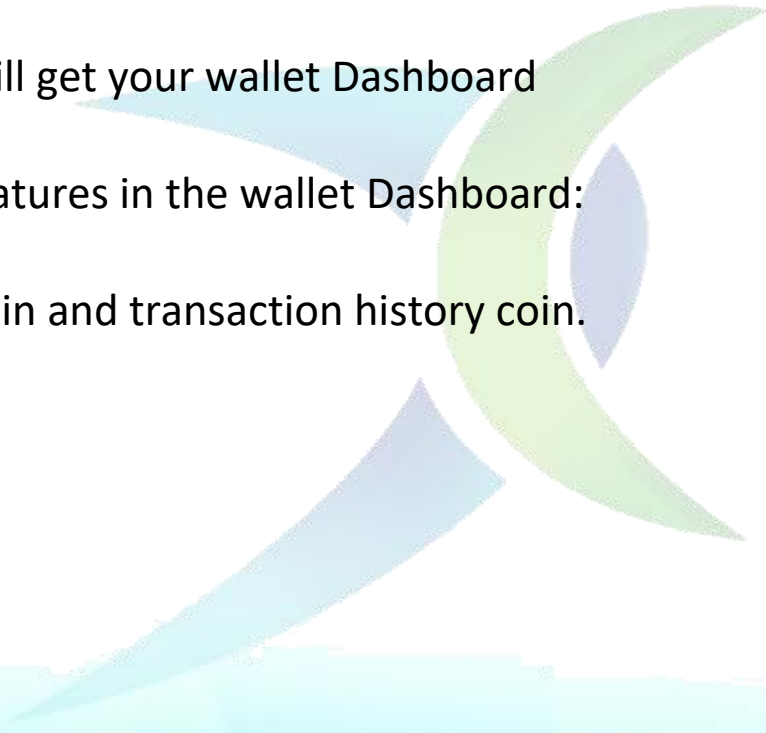

# How It Works

First step is to sign in\sign up

After signing up you will get your wallet Dashboard

You can use several features in the wallet Dashboard:

Send coin, Received coin and transaction history coin.

# Security Verification

There are 2 step of verification

- 1) DDOS
- 2) Email Verification

DDOS: This stands for the distributed denial-of-service, it is an attack in which multiple compromised computer systems attack a target, such as a server, website or other network resource, and cause a denial of service for users of the targeted resource. We have use this security feature in our project so there would not be a obstacle.

Email Verification: You all must be aware from this feature as in normal app also these feature is imperative and it is a core part of technology. As soon as you will sign up or sign in you will get a link on your Email ID, you have to login through it that link and it will confirm your identity.

# Security Verification

Mining crypto coins is an arms race that rewards early adopters. This responsibility bears on special nodes called miners, and a process is called mining. Mining was introduced with Bitcoin in 2009. The blockchain is run by miners, who use powerful computers that tally the transactions.

XS Coin is based on the Proof of work

Proof Of Work: Through POW, competition use held between the miners and that competition leads to the complete transaction on the network and get rewarded. During the process, users use to send the digital tokens to each other. Over there blockchain collects all the transactions into blocks. Through POW it uses to get confirm the transactions and use to arrange the blocks. It has the purpose of exhausting the resources of a computer system by sending multiple fake requests. This technique was launched by the Santoshi who has created the first Bitcoin which was created in 2009. Whereas, Proof of work describes a system that requires a not-insignificant but feasible amount of effort in order to deter frivolous or malicious uses of computing power, such as sending spam emails or launching denial of service attacks.

# Mining

Proof of stake (POS) : is a type of the algorithm by which a cryptocurrency blockchain network motive is to achieve distributed consensus. In PoS-based cryptocurrencies, the creator of the next block is chosen via various combinations of random selection and wealth or age (i.e., the stake).

When block rewards are produced through txn fees, a proof of stake system would result in lower equilibrium txn fees. Lower long-run fees would increase the competitiveness of bitcoin relative to alternative payments systems. Intuitively reduced fees are due to vast reductions in the scale of wastage of resources.

# Conclusion

XS coin has started its planning and research since a long time, This project is based on full of planning as well as on research. It is a melange of the special features, security mining, and hard work and expertise team. The motive of is the coin to spread all over the world and to survive until the end.

The coin is based on special features that are real web wallet, highly security enabled the web wallet, Zero transferable charges for the transaction from wallet to wallet, based blockchain technology, User can mine free coin from their homes and from their laptops via get up and they can send money to any country and charges will not occur on it. Best technologies like blockchain, POW, DDOS has been used in it.

**Thank You**
